PokéXGames Held Items Guide

How the Held system works, and which Held Items to use in PvP

How to read this guide: facts come from the official PXG wiki. Points marked **[Author note]** come from the guide author's own PvP experience and are not stated on the wiki. Points marked **[Analysis]** are conclusions drawn from the wiki's effect descriptions, not an official meta. Game values can change after patches, so re-check the wiki before spending resources.

1. What is a Held Item?

A Held Item is an item you equip on a Pokémon (or on your Device) to give it a bonus. Every Held Item has a **Tier**: the higher the Tier, the stronger and rarer it is. The Tier also sets its color: **Tier 1 is brown** and **Tier 7 is red**. A few items have their own color, such as Y-Antiburn.

- **Slot rule:** a Pokémon can carry at most **two** Held Items at once, and they must be of different types: one **X** and one **Y**.
- **X vs Y:** all Offensive and Defensive Helds are X. Utility Helds can be X or Y.
- **Main source:** the Duelist Brotherhood quest. You can also get them from Held Item Tickets and by fusing lower Tiers (section 4).

Equipping and removing

- **Equip on a Pokémon:** keep the Pokémon in your backpack, right-click the Held Item, left-click the Pokémon, wait 3 seconds, then press "Yes".
- **Equip on a Device:** use the Held Item on the Device and confirm. The new Held replaces any previous one. The **Improved Device** has two modes (Default and Defensive), and the Held goes into the mode the Device is in at that moment, so check it first.
- **Remove from a Pokémon:** talk to NPC **Apolo** in the Trade Center (Pokémon outside its Pokéball) and pay the fee.
- **Remove from a Device:** NPC **Atena**, also in the Trade Center, for the same fee. On an Improved Device she only removes the Held of the mode currently in use.

Warnings

- Once equipped on a Pokémon, a Held can only be removed by paying Apolo.
- Equipping a Held of the same type on a Pokémon that already has one (for example an X on an X) **destroys the old one forever**. Example from the wiki: using an X-Lucky on a Pokémon wearing an X-Elemental deletes the X-Elemental.

Removal fees (Apolo for Pokémon, Atena for Devices). K = thousand, KK = million.

Tier	1	2	3	4	5	6	7	8	9
Fee	10K	25K	50K	200K	900K	2.5KK	5KK	15KK	30KK

2. All Held Items

Offensive and Defensive Helds (all X type)

Held	Effect	T1	T2	T3	T4	T5	T6	T7	T8
X-Attack	Raises the Pokémon's strength by X%	8%	12%	16%	19%	22%	25%	28%	31%
X-Critical	X% chance of a critical hit	8%	10%	12%	14%	16%	20%	24%	27%
X-Defense	Raises defense by X%	8%	10%	12%	14%	16%	20%	24%	27%
X-Block	X% chance to block 90% of an incoming attack	6%	8%	10%	12%	14%	18%	22%	25%
X-Vitality	Raises the Pokémon's HP by X%	5%	8%	12%	15%	19%	22%	25%	-
X-Harden	X% chance to use Harden	4%	7%	10%	13%	16%	19%	22%	-

X-Harden only triggers while the Pokémon is attacking the opponent.

X-Boost (stat bonus that depends on player level)

X-Boost gives HP equal to X levels of boost and **double that amount as attack**. It grows with the player's level range, **except in PvP content**. Its status-resistance bonus never goes above that of a +50 Pokémon.

Level range	T1	T2	T3	T4	T5	T6	T7
0 to 99	6	8	10	12	14	16	18
100 to 149	9	12	15	18	21	24	27
150 to 399	12	16	20	24	28	32	36
400 to 625	15	20	25	30	35	40	45

Utility X Helds

Held	Effect	Tier range
X-Lucky	Raises item drop chance from Pokémon (multiplies the base chance; a 4% drop becomes 8% with +100%)	10% to 100% (T9: 150%)
X-Experience	More experience from defeating wild Pokémon	10% to 40%
X-Accuracy	Higher chance to land negative status effects	20% to 50%
X-Return	Reflects part of the damage taken. The listed % applies to other players' Pokémon; against wild Pokémon it is multiplied by 10	2.5% to 9%
X-Poison	Raises Poison status damage	90% to 300%
X-Hellfire	Raises Burn status damage	90% to 300%
X-Rage / X-Strafe	Chance to use Rage / Strafe (only while attacking the opponent)	10% to 100%
X-Agility	Chance to use Agility (only while attacking the opponent)	8% to 60%
X-Haste	Raises Pokémon speed (does not affect Fly or Ride speed)	+60 to +250
X-Elemental	Chance to trigger a passive of the Pokémon's element. Dual-type Pokémon get a random one of their elements. Reduced damage under player level 100. Does not work on Crystal Onix	8% to 22%
X-Cooldown	Reduces attack cooldowns. No effect on attacks whose cooldown is already 10 or less	T3: 11%, T5: 14%, T7: 17%
X-Blink	Reduces Blink cooldown by 70%	T5 only
X-Upgrade	Raises an X Held already equipped on the Pokémon by one Tier (T3 to T8 versions). Does not work with Y Helds	3>4 up to 7>8

Y Helds

Held	Effect (wiki)	Tier range
Y-Teleport	Reduces the Teleport skill cooldown by X minutes	5 to 28 min
Y-Wing	Raises the Pokémon's flying speed	+100 to +420
Y-Cure	X% chance to remove a negative status that hit the Pokémon	45% to 100%
Y-Control	Reduces the Control Mind cooldown by X seconds. [Author note] Does not work in PvP content	40 to 160 s
Y-Regeneration	Regenerates X HP per second while out of combat (capped at 100/s for players level 100 or lower)	700/s to 5000/s
Y-Antiburn	Reduces Burn damage by 50%	T4 (wiki lists T6)

Held	Effect (wiki)	Tier range
Y-Antipoison	Reduces Poison damage by 50%	T4 only
Y-Ghost	Gives the Pokémon ghost properties (pass through walls). Meant for non-Ghost Pokémon	no Tier
Y-Light / Headbutt / Dig / Smash / Cut	Teaches the Pokémon that skill (Light, Headbutt, Dig, Rock Smash, Cut)	no Tier
Y-Teleport / Y-Wing Upgrade	Upgrades a T7 Y-Teleport / Y-Wing to T8	7>8
Y-Antiself, Y-Blur	**Obsolete.** No effect anymore (Antiself since 23/06/2022, Blur since 31/10/2018). Only useful for fusion	-

[Author note] Y-Antiburn is a **Tier 4** held in game. The wiki lists it as Tier 6, which is an error.

3. Which Helds to use in PvP

Remember the slot rule: one X and one Y per Pokémon. In PvP, many Y Helds do nothing, so the Y slot is mostly a situational choice.

Tier cap in PvP

- [Author note] Held Items are **capped at Tier 7 in PvP content**. Tier 8 and Tier 9 Helds give no extra benefit there, so all PvP values in this section are shown at Tier 7.
- [Analysis] For PvP builds, spending on Tier 8 upgrades (X-Upgrade, Y-Teleport Upgrade, Y-Wing Upgrade) will not improve your PvP performance. Tier 7 is the target.

Helds that do NOT help in PvP

- **Y-Cure:** does not work in duels (wiki). Do not count on it to clear status in PvP.
- **Y-Regeneration:** only heals out of combat, and the wiki says it does not work in duels either.
- **Y-Control:** [Author note] does not work in PvP content, so skip it even on Pokémon with Control Mind.
- **Y-Teleport:** [Author note] only useful for Teleport in PvE. It just shortens the Teleport cooldown and adds nothing in a fight.
- **X-Lucky and X-Experience:** [Analysis] they only affect drops and experience from wild Pokémon.
- **Y-Light, Y-Headbutt, Y-Dig, Y-Smash, Y-Cut:** [Analysis] exploration skills, not meant for duels.
- **Y-Antiself and Y-Blur:** obsolete, only used as fusion material.

Best X Helds for PvP [Analysis]

Held	Why it matters in PvP	Role
X-Attack	Straight damage increase, up to +28% at the Tier 7 PvP cap	Damage
X-Critical	Adds critical hit chance, up to 24% at Tier 7. Good for burst damage	Damage
X-Defense	Flat defense increase, up to +24% at Tier 7. Best choice when you want to survive for a long time (see tips below)	Tank / bruiser
X-Block	Chance to cut 90% of a hit, up to 22% at Tier 7. Best on fragile support Pokémon (see tips below). It cannot be used in fusion, so keep the ones you find	Tank
X-Vitality	More HP, up to +25% at Tier 7. Helps survive burst and status damage	Tank
X-Accuracy	Helps status moves land (stun, sleep, etc. depending on your Pokémon)	Disruptor
X-Poison / X-Hellfire	Big boosts to Poison or Burn damage (up to +300%). Only worth it on Pokémon that apply those statuses	Status damage
X-Return	Reflects 2.5% to 9% of damage taken from other players' Pokémon. The value is small in PvP	Situational
X-Haste	Extra movement speed (not Fly or Ride). Useful for chasing or escaping	Mobility
X-Boost	Gives HP and attack, but the level-scaling bonus does not apply in PvP content, so check what you actually get	Situational
X-Harden / Rage / Strafe / Agility	Random chance to use the move, and only while attacking. Less reliable than the core Helds above	Situational

Held	Why it matters in PvP	Role
X-Elemental	Random passive chance. For dual-type Pokémon the element is random, and damage is reduced under level 100	Situational
X-Cooldown	Shortens attack cooldowns, but has no effect on attacks with a cooldown of 10 or less	Situational

Best Y Helds for PvP [Analysis]

Held	When to use it
Y-Antiburn (T4)	Take it when the enemy team relies on Burn. Cuts Burn damage by 50%
Y-Antipoison (T4)	Take it when the enemy team relies on Poison. Cuts Poison damage by 50%
Y-Wing	Faster flying for Pokémon that fly in the arena. Mobility only
Y-Ghost	[Author note] Good for Pokémon that are **not** Ghost type. They gain the ghost ability and can pass through opponents and obstacles. It gives no stat bonus, only movement. Ghost types already have it, so it is pointless on them

PvP tips: X-Defense vs X-Block [Author note]

- **For long tankiness, pick X-Defense over X-Block.** If the goal is to survive for a long time and stay alive until your cooldowns refresh, X-Defense is better. It lowers every hit you take, while X-Block only works on a random chance.
- **X-Block is great for Healers and support Pokémon.** This applies to Healers that do not need X-Accuracy to disturb the enemy and whose only goal is to give support or heal. They are weak and die easily, so X-Block can shield them better than X-Defense.

Example setups [Analysis, not an official meta]

Role	X Held	Y Held
Tank (long survival)	X-Defense (or X-Vitality)	Y-Antiburn or Y-Antipoison, depending on the enemy team
Healer / support	X-Block (no need for X-Accuracy)	Y-Antiburn or Y-Antipoison, depending on the enemy team
Damage dealer	X-Attack or X-Critical	Y-Antiburn / Y-Antipoison if the enemy uses status, otherwise Y-Wing or Y-Ghost (non-Ghost types)
Disruptor / status	X-Accuracy, X-Poison or X-Hellfire (match your status)	Y-Antiburn / Y-Antipoison depending on the enemy team, or Y-Ghost if it is not a Ghost type

Important detail

- The wiki says Y-Cure and Y-Regeneration do not work in **duels**. This guide treats that as meaning PvP duels. If you notice a different behavior in another PvP mode, trust what you see in game and report it.

4. Getting better Helds: fusion and tickets

Fusion machine

- The machine is on **New Island**. You must have completed the **Mewtwo Clones** quest at least once.
- Put in **3 Helds of the same Tier** (they do not need to be the same Held) and pay the fee. You receive one random Held of a higher Tier.
- **X-Block cannot be fused.**
- Fusing three Tier 7 Helds only gives: Defense, Wing, Teleport, Lucky, Critical or Attack.

Fusion	T1>T2	T2>T3	T3>T4	T4>T5	T5>T6	T6>T7	T7>T7
Fee	60,000	150,000	300,000	700,000	1,000,000	1,500,000	1,500,000

Fees are in dollars (in-game currency).

Held Item Tickets

- Give 1 Ticket to NPC **Victoria** to get 1 X Held: X-Attack, X-Defense, X-Critical, X-Block or X-Accuracy.
- Tickets come in Tiers 3 to 7. Tier 6 and 7 can be earned in the Global Tournament, and some Tier 4, 5 and 7 Tickets come from quests (such as Nena, Borin and Mysteries from the Ruins of Alph).
